

Course Summary

Instructor-led training

Google Cloud

And this brings us close to the end of this course. Thank you for your time and attention today!

Before you go, let's take a few minutes to review what's been covered.

Module 01

- 01 Infrastructure as Code overview.
- 02 Features and benefits of using Terraform.
- 03 Use case of Terraform for Google Cloud.
- 04 How to use Terraform for Google Cloud.

Module 02

- 01 Terraform workflow.
- 02 Basic configuration files within Terraform.
- 03 Purpose of a few Terraform commands.
- 04 Terraform Validator tool overview
- 05 Create, update and destroy Google Cloud resources using Terraform.

Module 03

- 01 Resources within Terraform.
- 02 Implicit and explicit resource dependencies.
- 03 Variables and output values
- 04 Terraform Registry and Cloud Foundation Toolkit.

Module 04

- 01 Terraform Modules
- 02 Use modules to reuse configurations.
- 03 Use modules from the public registry.
- 04 Use input variables to parameterize configurations.
- 05 Use output values to access resource attributes outside the module.

Module 05

- 01 Terraform state overview
- 02 Benefits of storing the state file remotely.
- 03 How to store the Terraform state in a Google Cloud Storage bucket.
- 04 Terraform state best practices.

So that you can find out a little more about some of the topics we've discussed today, we've put together a list of helpful links that you can access in your own time. You'll have access to a copy of this deck where you'll find these slides.

Feedback

We hope you've enjoyed today's course. It would be great for us if you could take a couple of minutes to give us feedback to ensure that we can continue to improve our training offering in the future.

Thank you!
